### Atmosphere And Heat Transfer Webquest Teacher Answers

What follows is a review of the way heat flows and is transferred, but applied to the atmosphere. Radiation is the transfer of energy between two objects by electromagnetic waves. Heat radiates from the ground into the lower atmosphere. In conduction, heat moves from areas of more heat to areas of less heat by direct contact. Warmer molecules vibrate rapidly and collide with other nearby molecules, transferring their energy.

### Heat Transfer in the Atmosphere | Physical Geography

Atmosphere and Heat Transfer Web Quest Author: student Created Date: 10/7/2013 9:34:49 AM ...

### Directions: PART ONE: HEAT TRANSFER Go to the website ...

Heat transfer in the atmosphere is what creates air currents . Air usually flows from areas of high pressure to low pressure, which is what causes air current (commonly known as wind). Because of the permanent bands of high/low pressure, there are air currents called prevailing winds that flow nearly always.
