Problems On Trains Quiz Online Test - Aptitude Questions ...

A train is said to have crossed an object (stationary or moving) only when the last coach (end) of the train crosses the said object completely. It implies that the total length of the train has crossed the total length of the object. Hence, the distance covered by the train = length of train + length of objectDownload PDF Basic Formula

Problems on Trains with Solutions - PDF - BankExamsToday

Distance covered by first train+Distance covered by second train = 320 miles. $70t+20(t-2) = 320$. Solving this gives $t = 4$. So the two trains meet after 4 hours. Example 2. A train leaves from a station and moves at a certain speed. After 2 hours, another train leaves from the same station and moves in the same direction at a speed of 60 mph.

Distance, Time and Speed Word Problems | GMAT GRE Maths ...

Answer: a. 3 km/hr Explanation: Let speed of slower train = S km/hr Speed of faster = S+14 Trains meet after 12 hrs. = 12S Distance travelled by slower train in 12 hrs. = 12(S+14) The total distance to be traveled between the two stations is given. So, $12S+12(S+14) = 240$ $2S + 14 = 20$ $S = 3$ km/hr
