## The Electromagnetic Pulse Emp

An electromagnetic pulse ( EMP ), also sometimes called a transient electromagnetic disturbance, is a short burst of electromagnetic energy. Such a pulse's origin may be a natural occurrence or man-made and can occur as a radiated, electric, or magnetic field or a conducted electric current, depending on the source.

## Electromagnetic pulse - Wikipedia

An EMP pulse is electromagnetic energy. Once an EMP interacts with metal/wire it creates an electrical pulse in the metal. It will go to "ground" much like an electrical circuit -which incidentally is why electrical items get damaged by an EM pulse.
