Instructions for doing a virtual lab on fruit flies where students choose parents and breed F1 and F2 generations. Students follow instructions within the simulation while they answer the lab questions on this page.

### Drosophila Virtual Lab - The Biology Corner

Of course, fruit flies also have sex chromosomes and they contain a subset of genes as well. The genotypic notation for a mutant gene for white eye color on the X chromosome would look like: X w X w = white-eyed female. X w+ X w = wild type heterozygote female. X w Y = white-eyed male. X w+ Y = wild type male. Virtual Experiments \*\* Sexing Fruit flies

By breeding fruit flies (Drosophila melanogaster) of unknown genetic composition and studying the traits and ratios seen in their offspring, you will determine whether a trait follows a monohybrid or dihybrid pattern of inheritance and whether it is sex-linked or autosomal. You will use statistical analysis to support your conclusions.

### Pearson - The Biology Place - Prentice Hall

Our class is doing a lab which focuses on the genetic mutations in fruit flies. We are using fruit flies because they are easy to breed and it is easier to tell which genetic mutation that they have. Our group is focusing on the mutation Vestigial, which is a mutation of the wings. The mutation causes the fly's wings to shrivel and become useless.
