### Visual Studio Solution Configuration Manager

Solution configurations store solution-level properties. They direct the behavior of the Start (F5) key and Build commands. By default, these commands build and start the debug configuration. Both commands execute in the context of a solution configuration. This means that the user can expect F5 to start and build whatever the active solution is configured through the settings.

### Solution Configuration - Visual Studio | Microsoft Docs

When you create a project configuration (in the Configuration Manager, by choosing New on the drop-down menu in the Configuration column for that project) and select the Create new solution configurations check box, Visual Studio looks for a like-named solution configuration to build the project on each platform it supports. In some cases, Visual Studio renames existing solution configurations or defines new ones.
